DB: MySQL, PostgreSQL

Templating: HTML, CSS

Etc.: JSON, API, OpenCart

History
Sep 2021 — Current: **Django Full-stack Developer**

in own crypto analytical project and others own progects.
Some of my projects and basic information about me can see on the page https://alikk-a.github.io/myself/

- Receiving API data from third-party resources
- Processing of received data and preparation for output using the Plotly library
- Frontend - Django with a bootstrap template and a number of JavaScript elements
- Displaying data through the Plotly.js library
- Implementation of additional JavaScript scripts to control the appearance of charts and other functionality
- Collection and accumulation of received data in the PostgreSql database
- Preparation of various summary tables and graphs from these data
- Telegram bot for notification of various events
- Telegram bot - monitoring the appearance of new messages in certain channels, analyzing the context of messages and forwarding selected ones to other channels

I also have experience in implementing small tasks in PHP for my own purposes.

Extensive experience in managing people and organizing projects. From 1996 to 2014 - top head of a large wholesale department (distribution). 50-250 employees at different times.

About 8 years experience in WEB commerce. From 2014 to 2022 year - several owned online stores, marketplaces, etc. 5-10 employees at different times. Store sites, quite complex in terms of content, were made completely by myself on Opencart CMS. Sometimes I had to add directly to the code - PHP. I have a good idea of the architecture of common CMS. I have a good command of contextual advertising, SEO, SMM, analytical services, etc.

Education
Sep 1987 – Aug 1992 **Master of Science. Computer designer**
Kharkov National University of Radio Electronics
